## Invitation to the Future

At the embedded world show in Nuremberg, companies are looking for technologies for integration on board or device level. There, they find POWERLINK, the only real-time communication network system that is operable on standard Ethernet hardware and available as Open Source. It provides designers with full support without handing them any restrictions, thus helping secure a prosperous future for device manufacturers.

Stefan Schönegger, GM EPSG

Come and see for yourself on the booths of the EPSG and its partners!

## Open Standards at the embedded world Show

Introduced in 2008, openPOWERLINK is known as a truly vendor-independent solution for real-time communication via any Ethernet controllers and operating systems such as Windows, Linux or VxWorks.

At the embedded world exhibition & conference, the Ethernet Powerlink Standardization Group EPSG will be representing this standard that is recognized as the only Open Source protocol for real-time communication via Ethernet.

Visit the EPSG in Hall 4a, booth No. 524!

## POWERLINK Technology Partner Members at the Show

Stark evidence of the system's continued openness is the fact that aside of the EPSG (Hall 4A/4A-524), numerous additional partners will also show components and solutions for the integration of POWERLINK on their booths as well.
