## KUNBUS – industrial communication

KUNBUS GmbH is a leading supplier of fieldbus and industrial Ethernet solutions. In addition to embedded modules and PC insert cards, the company also offers custom solutions. The KUNBUS portfolio includes gateways for communication between different networks as well as tools for monitoring and diagnostics.

### Communication module

The KUNBUS-COM communication module is a simple way to equip devices with POWERLINK without the cost of internal development. With its compact dimensions of 85 x 65 millimeters, the module can easily be plugged into the control card of existing sensors and actuators or connected by a cable.

### Gateway module

The modular KUNBUS gateway makes it possible to combine POWERLINK networks with all other commonly used industrial Ethernet and fieldbus protocols. It can also be used to integrate the Raspberry Pi-based Revolution Pi Core into a POWERLINK network. With Revolution Pi, KUNBUS offers an open-source controller that can also serve as an IoT gateway.

### Custom solutions

KUNBUS also offers custom solutions for customers with specialized needs.

The POWERLINK gateway module allows integration of Revolution Pi and other devices into POWERLINK networks.
